Performance summary**

GBP—Vanguard U.K. Government Bond Index Fund
Benchmark— Bloomberg Barclays U.K. Government Float Adjusted Bond Index

The date range above for each year = 31 October 2013 - 31 October 2014 and the same for the respective years.

Performance**	1 month	Quarter	Year to date	1 year	3 years	5 years	10 years	Since inception
Fund (Net of expenses)	0.89%	-0.75%	-0.70%	1.02%	3.82%	4.76%	—	5.27%
Benchmark	1.00%	-0.63%	-0.74%	1.24%	3.96%	4.91%	5.78%	5.36%

**In this document the performance displayed for the Fund(s) and therefore relative performance to the benchmark index may be impacted by swing pricing. The NAV of a Fund swings according to subscription/redemption activity so that transaction costs caused by these cashflows are not borne by the existing holders in a Fund. The benchmark index is not affected by swing pricing and therefore you may see tracking difference between the performance of the Fund and the benchmark. Performance and Data is calculated on closing NAV as at 31 October 2018.

Past performance is not a reliable indicator of future results.

Income distribution

Amount (CPU)	Taxed distribution	Ex-dividend date	Distribution date	Valuation point	Tax status
—	Net	31 March, 30 June, 30 September, 31 December	14 April, 14 July, 14 October, 14 January	Underlying Market Close	UK Reporting

Key investment risks

The value of bonds and fixed income-related securities is affected by influential factors such as interest rates, inflation, credit spreads and volatility which, in turn, are driven by other factors including political, economic news, company earnings and significant corporate events. Movements in currency exchange rates can adversely affect the return of your investment.

Credit risk. The issuer of a financial asset held within the Fund may not pay income or repay capital to the Fund when due.

Liquidity risk. Lower liquidity means there are insufficient buyers or sellers to allow the Fund to sell or buy investments readily.

Counterparty risk. The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Index tracking risk. The Fund is not expected to track the performance of the Index at all times with perfect accuracy. The Fund is, however, expected to provide investment results that, before expenses, generally correspond to the price and yield performance of the Index.

Inflation risk. The value of your investments may not be worth as much in the future due to changes in purchasing power resulting from inflation.

Please also read the risk factors section in the prospectus and the Key Investor Information Document, both of which are available on the Vanguard Website.

*The minimum initial investment of (Investor) Income and Accumulation shares or for anyone approaching Vanguard directly is £100,000.

†Synthetic Risk and Reward Indicator

Management Charges

Ongoing Charges Figure† 0.15%

†The Ongoing Charges Figure (OCF) covers administration, audit, depository, legal, registration and regulatory expenses incurred in respect of the Funds. When you invest with any fund manager, you pay a number of charges, starting with the Annual Management Charge (AMC) which covers the fund manager's costs of managing the fund. The AMC plus ongoing running costs and other operational expenses make up the fund's total 'ongoing charges figure'.

Investment objective

The Fund seeks to provide returns consistent with the performance of the index, a market-weighted index of UK government fixed income securities denominated in pound sterling.

Investment strategy

The Fund employs a passive management or indexing strategy designed to track the performance of the index, which is a subset of the Bloomberg Barclays Global Aggregate Float Adjusted Bond Index. This market-weighted index is designed to reflect the total universe of pound sterling-denominated United Kingdom treasury and government-related securities with maturities greater than one year.

Income - GBP

Data as at 31 October 2018 unless otherwise stated.

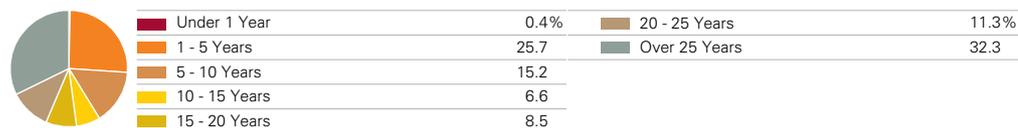

Characteristics

	Fund	Benchmark
Number of bonds	62	63
Effective YTM	1.46%	1.46%
Average coupon	3.2%	3.1%
Average maturity	18.1 years	18.1 years
Average quality	AA	AA
Average duration	12.7 years	12.7 years
Cash investment	0.0%	—
Distribution Yield	1.32%	—

Market allocation

Distribution by credit maturity (% of fund)

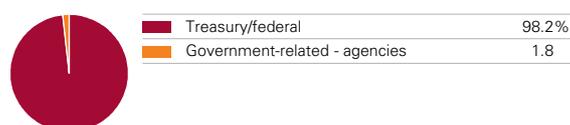

Distribution by credit quality (% of fund)

Credit-quality ratings for each issue are obtained from Barclays using ratings derived from Moody's Investors Service, Fitch Ratings, and Standard & Poor's. When ratings from all three agencies are available, the median rating is used. When ratings are available from two of the agencies, the lower rating is used. When one rating is available, that rating is used.

Distribution by issuer (% of fund)

Investment risk information

The value of investments, and the income from them, may fall or rise and investors may get back less than they invested.

Funds investing in fixed interest securities carry the risk of default on repayment and erosion of the capital value of your investment and the level of income may fluctuate. Movements in interest rates are likely to affect the capital value of fixed interest securities. Corporate bonds may provide higher yields but as such may carry greater credit risk increasing the risk of default on repayment and erosion of the capital value of your investment. The level of income may fluctuate and movements in interest rates are likely to affect the capital value of bonds.

The fund(s) may invest in financial derivative instruments that could increase or reduce exposure to underlying assets and result in greater fluctuations of the fund's Net Asset Value. Some derivatives give rise to increased potential for loss where the fund's counterparty defaults in meeting its payment obligations.

Some funds invest in securities which are denominated in different currencies. Movements in currency exchange rates can affect the return of investments.

Glossary for fund characteristics

The fund characteristics section above contains a number of metrics that professional investors use to value individual stocks against a market or index average. These metrics can also be used to value and compare funds to the market by taking the average of all the stocks held in the fund and comparing them to those of the fund's benchmark index. We've provided a definition of the terms used for your convenience.

Effective YTM (yield to maturity) is the rate of return an investor would receive if the fixed income securities held by a fund were held to their maturity dates.

Average coupon is the average interest rate paid on the fixed income securities held by a fund. It is expressed as a percentage of face value.

Average maturity is the average length of time until fixed income securities held by a fund reach maturity and are repaid, taking into consideration the possibility that the issuer may call the bond before its maturity date. The figure reflects the proportion of fund assets represented by each security; it also reflects any futures contracts held. In general, the longer the average effective maturity, the more a fund's share price will fluctuate in response to changes in market interest rates.

Average quality is an indicator of credit risk. This figure is the average of the ratings assigned to a fund's fixed income holdings by credit-rating agencies. The agencies make their judgment after appraising an issuer's ability to meet its obligations. Quality is graded on a scale, with Aaa or AAA indicating the most creditworthy bond issuers.

Average duration is an estimate of how much the value of the bonds held by a fund will fluctuate in response to a change in interest rates. To see how the value could change, multiply the average duration by the change in rates. If interest rates rise by 1 percentage point, the value of the bonds in a fund with an average duration of five years would decline by about 5%. If rates decrease by a percentage point, the value would rise by 5%.

Distribution yield reflects the amounts that may be expected to be distributed over the next twelve months as a percentage of mid-market unit price as at the date shown. It is based on a snapshot of the portfolio on that day. It does not include preliminary charge and investors may be subject to tax on distributions.
